Electric Tug Features and Specifications

1.The CartCaddyHD Chain Drive comes standard with a 36-volt system, 3 12-volt batteries, designed to give the operator 16-hours of continuous use, without moving a cart, before recharging. Plenty of battery life to usually last two shifts. 3 12-volt batteries, designed to give the operator 16-hours of continuous use, without moving a load, before recharging. Plenty of battery life to usually last two shifts.

2.The mover has a variable speed twist grip for forward and reverse cart directions from 0 to 2 mph. The ergonomically correct variable speed feature prevents carpal tunnel and allows the operator to maintain smooth control while intricately maneuvering the cart. The CartCaddyHD Chain Drives ability to go 2 mph allows the machine to keep up with the operator without frustration from waiting for a slowly operating machine when operating the unit from point A to B through-out your facility

3.The safety stop switch positioned at the back of the handle bar box immediately stops the mover when depressed to prevent any possible injury from operating the device and pulling a cart. This feature is a must when buying any piece of equipment.

4.The electric lift option and customized attachment prevent you from having to fabricate multiple attachments on everyone of your carts or equipment. The CartCaddyHD Chain Drive lift kit transfers weight from your cart to the front drive wheels of the CartCaddy for better traction when moving your load.

5.The Mover is designed for easy maneuvering and pivoting of your loads. After the arm is attached firmly to your carts or equipment, the unit can pivot a full 180 degrees under the arm. This feature allows for turning your loads a full 90 degrees without jack knifing your cart or manually turning the front of you load.

Standard Features

- Heavy Duty Steel Frame
- 2000 lb. Differential / Transaxle
- 2:1 Gear Reduction with Chain to Drive Tires
- High Tech Speed Controller
- Neutral Throttle Braking
